

# IS OVERPACKING DEFLATING YOUR BOTTOM LINE?

## AIRWRAP

bridges the gap between void fill  
& cushioning applications.

# AIRWRAP<sup>®</sup> a Fill-Air<sup>®</sup> Solution

AirWrap bridges the gap between void fill & cushioning applications, harnessing the flexibility of air to fit any business. The solution runs on the efficient Fill-Air<sup>®</sup> Rocket, while simultaneously reducing packaging material usage and improving DIM weight.

## **Double** your throughput.

AirWrap utilizes the powerful Fill-Air<sup>®</sup> Rocket that can inflate up to 100 feet of air pillows per minute. This capability not only matches the speed of your business, but has the ability to improve it.

## Reduce material usage up to **60%**.

Compared to low end bubble cushioning material, AirWrap uses up to 60% less linear feet of material to package the same product. This not only reduces material cost, but improves efficiency.

## The right performance with up to **50% cost savings.**

For light & durable goods, no need to incur additional material cost for low end bubble cushioning applications. Fill-Air Airwrap has the utility at the price of void fill applications.

## **Increase productivity**, reduce downtime.

Due to a higher reliability, AirWrap<sup>®</sup> has efficiency that allows your business to get more packages out the door with less downtime at each packing station.

The  
**POWER** of AIR
